DETAILED ACTION

1. Claims 1 to 19 are presented for examination.

Allowable Subject Matter

2. Claims 1 to 19 are allowed.
3. The following is an examiner's statement of reasons for allowance: the instant invention is directed to a low density parity check (LDPC) code decoder with a Lk^2 variable node and a bidirectional shuffle network connected to a K^2 RAM that is not taught in the prior art made of record. For instance, the prior art made of record teaches various methodologies of LDPC decoders.

Mehta et al. (*An FPGA implementation of the graph encoder-decoder for regular LDPC codes*, IEEE), teaches the implementation of LDPC codes on an FPGA chip wherein the joint encoding –decoding process uses the message passing algorithm to effect precision. Kurkoski et al. (*Joint message-passing decoding of LDPC codes and partial response channels*, IEEE) discloses a decoding method for LDPC codes using a message-passing algorithm wherein a joint decoder/detector is analyzed in a parallel mode for high throughput decoding. Richardson et al. (*The capacity of low-density parity-check codes under message-passing decoding*, IEEE) discloses a method for evaluating the message-passing algorithm for decoding LDPC codes.

However, the prior art made of record, taken alone or in combination fails to teach or fairly suggest or render obvious the novel element of the instant invention of an

integrated circuit that implements a LDPC code decoder with Lk^2 variable node functions comprising a bidirectional shuffle network connected to the k^2 RAM as recited in the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
